

# Concurrency Continued

→ Starts at 9:06 pm

## Agenda

- Thread synchronisation
- Synchronisation Primitives
- Race Conditions
- Deadlocks
- Livelocks
- Starvation.

## Synchronisation Primitives.

are a set of rules.

## ① Mutex (Mutually exclusion lock)

## ② Semaphores.

### ① Binary

0 → locked

1 → unlocked

$T_1 \rightarrow$  1 unlocked  
 $\rightarrow$  0 locked

$T_2 \rightarrow$  ~~X~~

Binary semaphores are similar to mutex.

## ② Counting semaphores.

counter  $\rightarrow 3$

acquire  $\rightarrow$  decreases the counter  
 release  $\rightarrow$  increases the counter

$> 0$  only then acquire is allowed.

DB

		3
$T_1$	acquire $\rightarrow$	2
$T_2$	A $\rightarrow$	1
$T_3$	A $\rightarrow$	0
$T_4$	<del>A <math>\rightarrow</math></del>	
$T_3$	R $\rightarrow$	1
$T_4$	A $\rightarrow$	0

$\rightarrow$  Race Condition.

Counter 0

Invalid? Race

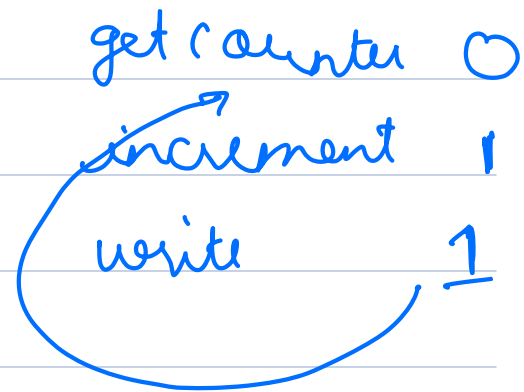

$T_1 \rightarrow 0 \rightarrow 1$

$T_2$  hanging.

$T_2 \rightarrow 0 \rightarrow 1$

Counter 1

Counter 2

Counter 2

$T_1 \rightarrow 2 \rightarrow 3$

$T_2 \rightarrow 2 \rightarrow 3$

Correct value  $\rightarrow 4$

$T_1 \rightarrow$  <sup>2</sup> Counter  $\rightarrow 0$

$T_2 \rightarrow$

$\rightarrow$  Deadlock

## ① Resource ordering

$T_1 \xrightarrow{L} R_1 \xrightarrow{L} R_2 \rightarrow \text{Release the locks}$

$T_2 \not\rightarrow R_1$

$T_2 \rightarrow R_1 \rightarrow R_2 \rightarrow \text{Release the locks.}$

## ② Timeouts

Break  $\rightarrow$  10:25pm

## Livelocks

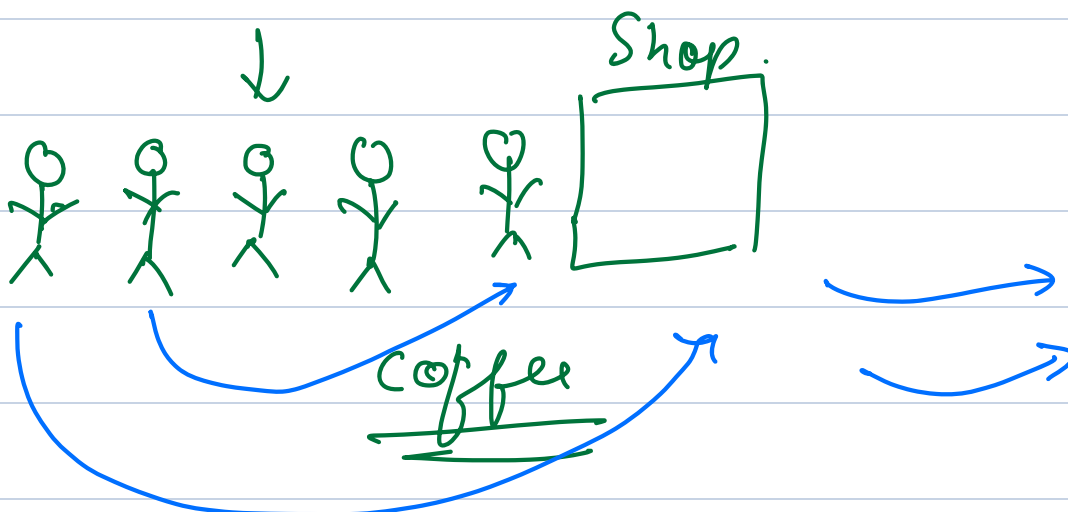

A livelock is a situation where two or more processes or threads keep changing their state in response to each other, but they never make any actual progress.

Preventing.

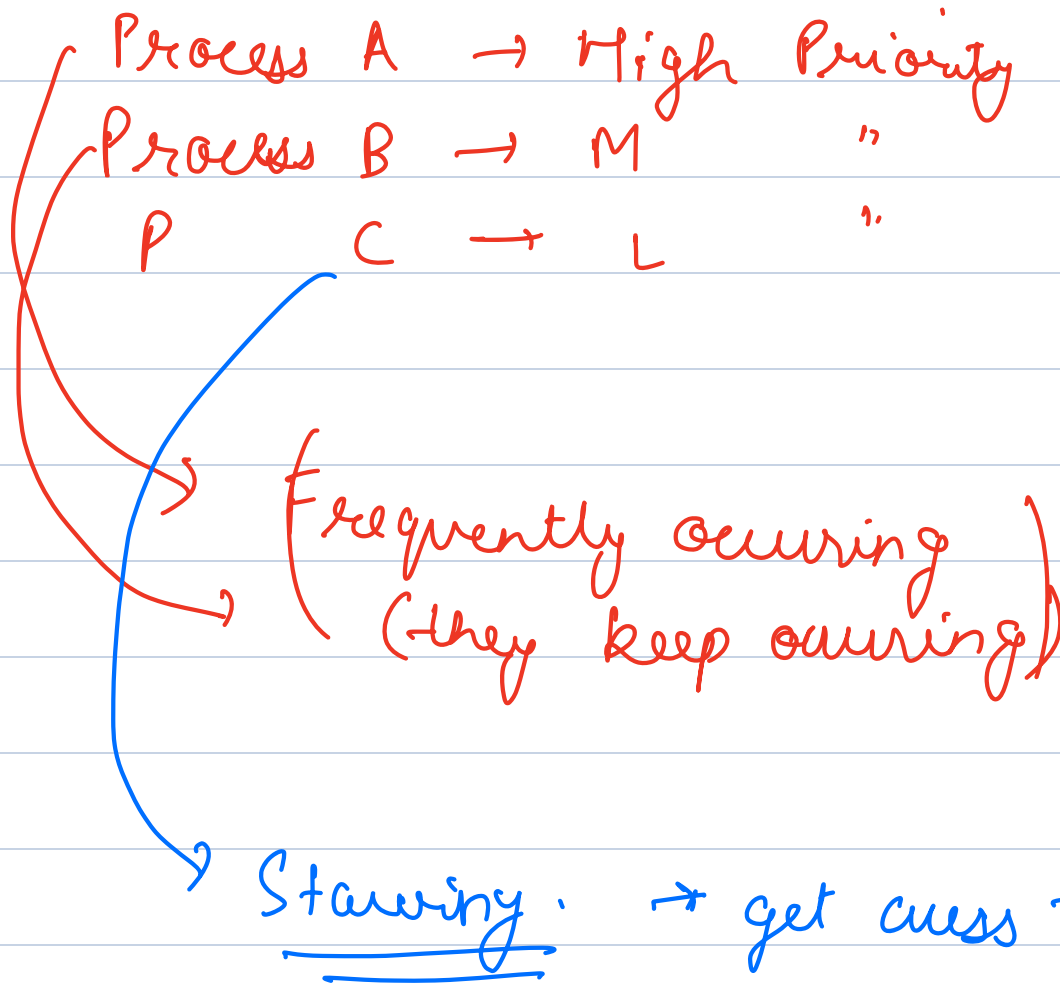

- ① Delays.
- ② Priority

→ Starvation

Starvation is a condition where a process or thread is denied the resources it needs to proceed.

→ Prevention.

→ aging

Aging gradually increases the priority of processes that have been waiting for a long time, ensuring that even low-priority processes eventually get a chance to execute.

Shells.

→ Bourne Shell

/bin/sh

→ Bourne again shell

/bin/bash.

→ zsh

→ csh (Customised by C Programming)

→ ksh

→ Fish (Friendly interactive)

What is .Bashrc

alias → pwd

p → pwd

kubectl get pods.

↑  
→ kgp

~/.bashrc

PS1 → Prompt string.

→ : 53, 7rs / ^ / #

53: i

PS1='\u@h:\w\\$\'
